

ROBOT - BASIC MANIPULATOR

DL ROBOT

TRAINING OBJECTIVES

Basic manipulator developed for teaching, demonstration, practical training and design in relation to the mechatronic, automation and information technology principles.

Thanks to this product, it is possible to understand the mechanical structure of the robots used in the industrial sectors, design and execute debugging procedures for the control of the system, analyze and solve problems that occur in an actual operational process.

Based on the order code, it is possible to change the control unit by choosing between a microcontroller and a PLC.
